

Best flea and tick medicines for dogs reviews

By Doggie Corp | Oct. 5, 2022, 3:19 p.m.

When caring for our pets, we always strive to provide the best life that they can have. After all, they are a family that we chose. No matter what breed of dog they are, big or small, they deserve human love and respect.

However, even if we do our best to give them a safe environment to live in, we cannot always control everything. There are things out there that may affect our beloved dogs, such as fleas and ticks. These pests are incredibly harmful to animals and may even cause more serious diseases if not treated properly.

Fortunately, there are ways to combat these situations. This article will find the best fleas and tick medicines for dogs, so your pet won't have to suffer anymore. Continue reading if you are interested to learn about them.

One of the ingredients of Comfortis is Spinosad, an insecticide that targets the nervous system of pests. It works by making the fleas and ticks enter hyperexcitation, which progresses into paralysis and eventually death. Keep in mind that it only affects insects, so it would be safe for your dogs to ingest.

Comfortis is an excellent product for controlling flea infestations. Its mode of action can be considered unique, as not many products use this style to eliminate fleas and ticks.

You can give to your dog once a month, partnered with a full meal. Comfortis come in several sizes, and choose the one that best suits your dog's size. Dogs despise most medications due to their unlikely taste and smell, but this is a chewable flavored tablet that most dogs will surely enjoy.

Comfortis is safe to administer to dogs older than 14 weeks old. Still, it wouldn't hurt to ask your veterinarian if your dog is nursing, pregnant, breeding, and has existing neurological conditions.

Features

Effectivity starts 30 minutes after ingestion

Kills 100% of mature fleas within four hours

Treats flea allergy dermatitis

It comes in flavored chewable tablets

Active Ingredients

Spinosad – kills fleas and prevents further infestation

Milbemycin oxime – kills worms living inside your pup's intestines

Pros

Gentle

Best for active dogs

Safe for puppies and older dogs

Good value

Cons

It may cause irritation

May induce adverse effects on cats

[#2 Nexgard: Best Oral Tick Prevention](#)

(Doggie Corp) | NexGard Chewables.

[Click here to Learn More](#)

Nexgard helps improve your dog's health by eliminating fleas and ticks. Many claim this product

works faster than most flea medications and may even clear the infection in a few hours. One of its active ingredients is the Afoxolaner, an ectoparasiticide that kills parasites in your pet's fur and skin. Aside from that, this product also helps provide month-long protection from flea eggs and further infestation by paralyzing the pests.

Like most flea medications out there, this targets the nervous system of the insects and stops the movement of ions in their nerve cells. From this, the fleas and ticks will eventually die before they can lay more eggs.

You can administer Nexgard during one of your dog's feeding times. It comes with a beefy flavor that your pup will surely love. However, if they are particular with everything that they consume, you can try to mask it with different foods such as a piece of meat, peanut butter, fruits, and more.

After consumption, the medication will immediately get absorbed into your dog's bloodstream and start working. Don't worry because it would not affect their nervous system like how it affects the fleas. Keep in mind that the pests will only get infected by the medicine if they try to bite your pet for a meal, and this will almost instantly kill them.

Nexgard is a highly recommended medication for dogs in combating annoying fleas and ticks. It works effectively and quickly, so they won't have to be exposed to excessive medicines.

Features

Convenient solution

Safe for dogs and children

It helps eliminate certain kinds of worms

Messy-free administration

Provides month-long protection

Active Ingredients

Afoxolaner – kills parasites living on your dog's fur and skin

Milbemycin oxime – targets parasites and worms inside the body

Pros

Good for Lyme disease

Delicious beef flavor

Safe for all dog breeds

Offers month-long protection from fleas and ticks

Cons

Not recommended for dogs with seizures

The medication will only infect ticks and fleas if they bite the body

[#3 Bravecto: Best Overall](#)

(Doggie Corp) | Bravecto Chews.

[Click here to Learn More](#)

The active ingredient Bravecto uses is the fluralaner, which acts mainly as an ectoparasiticide. It helps kill live parasites in the infected animal's skin, fur, and ears. Bravecto prevents the risks of *B. canis canis* infection, which affects the reproductive system of dogs. Severe cases may even lead to abortions and infertility.

It requires the pests to attach to the dog's skin and start feeding to be exposed to the substance. It also kills fleas, mites, and ticks that your dog might have accidentally ingested to prevent the risks of worms and internal complications.

Bravecto claims to kill fleas within eight hours of administration and 12 to 48 hours for ticks. If you use this product for cats, you can expect the medications to take action within 12 hours for fleas and 48 hours for ticks.

Features

Immediate effectiveness

Safe for puppies and pregnant dogs

Useful for killing mites

FDA-approved

Active Ingredients

Fluralaner – eliminates fleas after they hatch from eggs

Moxidectin – kills fleas and intestinal parasites

Pros

Long-lasting effect

Easy to administer

Fast acting

Widely available

Cons

May cause short-term moist dermatitis

Does not kill flea larvae

[#4 Simparica Trio: Best Combination Tick and Heartworm Prevention](#)

(Doggie Corp) | Simparica Trio

[Click here to Learn More](#)

Simparica is a traditional veterinary-prescribed medicine for fleas and ticks. It is in the form of a chewable tablet that you can administer every month as it provides long-lasting protection from pest infestation. This product is effective in combating flea allergy dermatitis in pets.

It usually targets mature fleas within 8 hours, while it takes around 12 hours for the ticks to get fully exposed. Simparica claims to be able to kill all of the ticks in your dog's skin and fur within 24 hours. This product can also be used to treat sarcoptic mange and demodicosis.

Unlike other medications, you can also use Simparica to treat ear mite infections, intestinal worms, and heartworms. All of that power is in one convenient pill.

Features

Liver-flavored

Chewable tablet

Requires one dose per month

It also treats ear mites

All-in-one medication

Active Ingredients

Sarolaner – help treat and control flea and tick infestations
